Biography

I am a researcher, engineer, and designer. I currently work as a Senior Research Programmer/Analyst (will be a Project Scientist from December 2018) in the CREATE Lab in the Robotics Institute at Carnegie Mellon University. My research focuses on designing, implementing, and evaluating interactive systems that support community engagement and democratize scientific knowledge. Techniques that I apply include:

- **Citizen Science/Civic Engagement** to empower lay people and professionals to establish sustainable partnerships and produce impactful scientific knowledge.
- **Human Computation/Crowdsourcing** to engage diverse community members in collecting high-quality data over large geographical areas and long periods of time.
- **Interactive Data Visualization/Storytelling** to enable communities to explore the collected data, identify patterns, form hypotheses, and raise public awareness by sharing findings.
- **Machine learning/Computer Vision/Artificial Intelligence** to assist communities in organizing scientific knowledge and interpreting patterns in large datasets.

Education

Ph.D. in Robotics 08/2014 – 08/2018
Carnegie Mellon University, Pittsburgh, USA
Thesis Title: Designing Interactive Systems for Community Citizen Science [O4]
Committee: Illah Nourbakhsh (advisor), Aaron Steinfeld, Jeffrey Bigham, and Eric Paulos

Master of Tangible Interaction Design 08/2011 – 12/2012
Carnegie Mellon University, Pittsburgh, USA

Dual B.S. in Architecture and in Computer Science 08/2005 – 05/2010
National Cheng Kung University, Tainan, Taiwan

Experiences

CREATE Lab, Robotics Institute, School of Computer Science, Carnegie Mellon University, USA

Project Scientist 12/2018 –
Senior Research Programmer 08/2018 – 11/2018
Ph.D. Student Researcher 09/2014 – 07/2018
Web Designer/Developer 10/2013 – 07/2014
Research Associate 01/2013 – 07/2013

Code Lab, School of Architecture, College of Fine Arts, Carnegie Mellon University, USA

Master's Student 09/2011 – 12/2012
Lab Assistant 09/2011 – 05/2012

IA Lab, Department of Architecture, National Cheng Kung University, Taiwan

Research Assistant 09/2010 – 06/2011

Awards and Honors

[A5] **Best Paper Honorable Mention Award (Top 5%)**. 2017. ACM CHI Conference on Human Factors in Computing Systems, USA. <https://dl.acm.org/citation.cfm?id=3025853>

[A4] **Webby People's Voice Award, Best Use of Video or Moving Image**. 2014. International Academy of Digital Arts and Sciences, USA. <https://www.webbyawards.com/winners/2014/web/website-features-and-design/best-use-of-video-or-moving-image/timelapse/>

Awards and Honors (Continued)	[A3] Best New Artist. 2009. The National Golden Award for Architecture, Taiwan. http://www.yestaiwan.com.tw/page06_5.html
	[A2] Third Prize, National Country House Design Competition. 2008. Ministry of the Interior, Taiwan.
	[A1] Outstanding Student Academic Achievement. 2005, 2006, 2007. Department of Architecture, National Cheng Kung University, Taiwan.
Referred Conference Papers	[C3] Yen-Chia Hsu , Paul Dille, Jennifer Cross, Beatrice Dias, Randy Sargent, and Illah Nourbakhsh. 2017. Community-Empowered Air Quality Monitoring System. In Proceedings of the 2017 CHI Conference on Human Factors in Computing Systems (CHI 2017). ACM. (Best Paper Honorable Mention Award, Top 5%)
	[C2] Yen-Chia Hsu , Tay-Sheng Jeng, Yang-Ting Shen, and Po-Chun Chen. 2012. SynTag: A Web-based Platform for Labeling Real-time Video. In Proceedings of the ACM 2012 Conference on Computer Supported Cooperative Work (CSCW 2012). ACM.

Projects

A Tool for Creating and Editing Interactive Stories on the EarthTime Timelapse 2018
I worked in a team to develop a web-based tool that enables users to create, edit, and share stories about nature changes and human impact on EarthTime, visualizing the transformation of the EarthTime over three decades with images and datasets. (<https://earthtime.org>)

Smell PGH: A Mobile Application to Crowdsourc and Visualize Pollution Odors [F6] 2017 – 2018
I worked in a team to develop Smell Pittsburgh, a mobile application for citizens to report pollution odors to regulators. A map visualizes the reports with air quality and wind data. A machine learning model predicts odors and sends push notifications. (<http://smellpgh.org>)

Visualization Tool for Environmental Sensing and Public Health Data [P2] 2017
I worked in a team to develop the Environmental Health Channel, an interactive web-based tool for visualizing health symptoms, particulate measurements, and personal stories from residents who are affected by oil and gas drilling development. (<http://envhealthchannel.org>)

Community-Empowered Air Quality Monitoring System [C3, O3, O1, F7, F5, F4] 2015 – 2016
I worked with a Pittsburgh community to develop an air quality monitoring system, which provides evidence with videos, air quality data, and smell reports. The system uses computer vision to generate a series of animated smoke images.

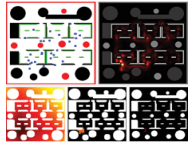

A Web-based Large-scale Timelapse Editor for Interactive Storytelling [P1] 2014
Based on the timelapse viewer, I developed a storytelling tool that operates along multiple dimensions: geolocation, time, and scale. Users can use it to create interactive slideshows or guided tours, and then embed or share them on social media for telling interactive stories.

Earth Timelapse Viewer Visualizing Landsat Satellite Imagery [F3, F2, F1]

2013

I worked in a team to develop an Earth timelapse viewer, consisting of 33 cloud-free mosaics of the planet with billions of pixels from 1984 to 2016. We released this tool with Google and TIME. (<https://earthengine.google.com/timelapse/>, <http://world.time.com/timelapse/>)

SimArch: A Multi-Agent System for Human Path Simulation [O2]

2012

SimArch uses Markov Decision Process to build a behavior model. The model simulates mental states, target range detection, and collision prediction when agents behave in a museum. SimArch outputs the prediction of how likely a person will occur in a location after simulation.

SENSEable Shoes: Hands-Free and Eyes-Free Mobile Interaction

2012

SENSEable Shoes is a platform for interaction designers to create applications. It recognizes low-level activities by measuring the weight distribution over the feet with sensors embedded in the shoe pad. A Support Vector Machine classifier identifies mobile activities and foot gestures.

Draw-o-lin: A Music Visualizer for Violin

2011

What does music look like? Draw-o-lin is an interactive mobile robot visualizing music by drawing graphs on a paper according to various sound properties. Violin performers control the robot by playing various pitches, alternating the volume, and changing the tempo of the music.

SynTag: A Web-based Platform for Labeling Real-time Video [C2, C1]

2010

Users can label Good, Question, and Disagree tags in real or non-real time with visualization of time-stamp video previews on an interactive timeline. SynTag creates thumbnails by using real-time tags for presenters to receive instant feedback and for others to retrieve videos.

Professional Activities

Program Committee/Reviewer

Taiwan Association of Computer-Human Interaction (TAICHI)
IEEE Robotics and Automation Magazine

2017 – 2018
2015

Conference Presenter

ACM Conference on Human Factors in Computing Systems (CHI)
Air and Waste Management Association (A&WMA)
ACM Conference on Computer-Supported Cooperative Work (CSCW)

2017
2017
2012

Invited Talks

Special Topics: Crowd Computing (05-899) Course, Carnegie Mellon University
Google Earth Engine User Summit, Mountain View

Fall 2017
2015

Invited Events

Bloomberg Philanthropies New Tech & Urban Air Pollution Meeting, New York

2017

Leadership

Department of Architecture, National Cheng Kung University, Taiwan

General Coordinator, Graduation Design Preparation Committee
Director of General Affairs, Student Committee
Class Representative

2009
2008
2007

Teaching

Robotics Institute, School of Computer Science, Carnegie Mellon University, USA

Teaching Assistant of 16-811 Math Fundamentals for Robotics

Fall 2015
