Biography

I am a computer scientist, researcher, and interaction designer. My research area includes **Human-Computer Interaction** (HCI) and **Community Citizen Science** (CCS), which focuses on designing, implementing, deploying, and evaluating interactive systems to support community engagement and democratize scientific knowledge.

Different from typical citizen science that focuses on engaging citizens to solve research questions driven by domain experts, CCS emphasizes "empowering communities" to represent their needs, address their concerns, and advocate for social impact. My research applies CCS to extend the conventional idea of sustainability in HCI, where experts invite lay people in facilitating common good with the intervention of technology, to a deeper level that sustains community engagement when experts are no longer involved after the intervention. Techniques that I apply include:

- **Crowdsourcing/Participatory Sensing** to engage communities in contributing user-generated content and collecting sensing measurements reliably.

- **Data Visualization/Storytelling** to enable communities to interactively explore data, identify patterns, form hypotheses, create narratives, and share findings.

- **Machine Learning/Computer Vision** to assist communities in mining scientific knowledge and interpreting complex patterns from large-scale datasets.

Education

Ph.D. in Robotics   08/2014 – 08/2018
Carnegie Mellon University, Pittsburgh, USA
Thesis Title: Designing Interactive Systems for Community Citizen Science [O4]
Committee: Illah Nourbakhsh (advisor), Aaron Steinfeld, Jeffrey Bigham, and Eric Paulos
CeDiploma ID: 185C-4146-Y9U9 (can be validated from the link below)
https://www.cmu.edu/hub/registrar/graduation/diplomas/electronic/validation/index.html

Master of Tangible Interaction Design   08/2011 – 12/2012
Carnegie Mellon University, Pittsburgh, USA

Dual B.S. in Architecture and in Computer Science   08/2005 – 05/2010
National Cheng Kung University, Tainan, Taiwan

Experiences

CREATE Lab, Robotics Institute, School of Computer Science, Carnegie Mellon University, USA

Project Scientist	12/2018 – present
Senior Research Programmer/Analyst	08/2018 – 11/2018
Ph.D. Student Researcher	09/2014 – 07/2018
Web Designer/Developer	10/2013 – 06/2014
Research Associate	01/2013 – 07/2013

Code Lab, School of Architecture, College of Fine Arts, Carnegie Mellon University, USA

Master's Student	09/2011 – 12/2012
Lab Assistant	09/2011 – 05/2012

IA Lab, Department of Architecture, National Cheng Kung University, Taiwan

Research Assistant	09/2010 - 06/2011

Awards and Honors	[A5] **Best Paper Honorable Mention Award (Top 5%)**. 2017. ACM CHI Conference on Human Factors in Computing Systems, USA. https://dl.acm.org/citation.cfm?id=3025853
	[A4] **Webby People's Voice Award, Best Use of Video or Moving Image**. 2014. International Academy of Digital Arts and Sciences, USA. https://www.webbyawards.com/winners/2014/web/website-features-and-design/best-use-of-video-or-moving-image/timelapse/
	[A3] **Best New Artist**. 2009. The National Golden Award for Architecture, Taiwan. http://www.yestaiwan.com.tw/page06_5.html
	[A2] **Third Prize, National Country House Design Competition**. 2008. Ministry of the Interior, Taiwan.
	[A1] **Outstanding Student Academic Achievement**. 2005, 2006, 2007. Department of Architecture, National Cheng Kung University, Taiwan.

Projects

A Tool for Creating and Editing Interactive Stories on the EarthTime Timelapse [T10]   2018

I worked in a team to develop a web-based tool that enables users to create, edit, and share stories about nature changes and human impact on EarthTime, visualizing the transformation of the EarthTime over three decades with images and datasets. (https://earthtime.org)

A Mobile Application to Crowdsource and Visualize Pollution Odors [F6, T4, T9]   2017 − 2018

I worked in a team to develop Smell Pittsburgh, a mobile application for citizens to report pollution odors to regulators. A map visualizes the reports with air quality and wind data. A machine learning model predicts odors and sends push notifications. (http://smellpgh.org)

Visualization Tool for Environmental Sensing and Public Health Data [P2, T5, T8]   2017

I worked in a team to develop the Environmental Health Channel, an interactive web-based tool for visualizing health symptoms, particulate measurements, and personal stories from residents who are affected by oil and gas drilling development. (http://envhealthchannel.org)

Community-Empowered Air Quality Monitoring System [C3, O3, O1, F7, F5, F4, A5]   2015 − 2016

I worked with a Pittsburgh community to develop an air quality monitoring system, which provides evidence with videos, air quality data, and smell reports. The system uses computer vision to generate a series of animated smoke images.

A Web-based Large-scale Timelapse Editor for Interactive Storytelling [P1, T7]   2014

Based on the timelapse viewer, I developed a storytelling tool that operates along multiple dimensions: geolocation, time, and scale. Users can use it to create interactive slideshows or guided tours, and then embed or share them on social media for telling interactive stories.

Earth Timelaspe Viewer Visualizing Landsat Satellite Imagery [F3, F2, F1, T7, A4]   2013

I worked in a team to develop an Earth timelapse viewer, consisting of 33 cloud-free mosaics of the planet with billions of pixels from 1984 to 2016, released with Google and TIME. (https://earthengine.google.com/timelapse/, http://world.time.com/timelapse/)

SimArch: A Multi-Agent System for Human Path Simulation [O2, T2]   2012

SimArch uses Markov Decision Process to build a behavior model. The model simulates mental states, target range detection, and collision prediction when agents behave in a museum. SimArch outputs the prediction of how likely a person will occur in a location after simulation.

SENSEable Shoes: Hands-Free and Eyes-Free Mobile Interaction [T3]   2012

SENSEable Shoes is a platform for interaction designers to create applications. It recognizes low-level activities by measuring the weight distribution over the feet with sensors embedded in the shoe pad. A Support Vector Machine classifier identifies mobile activities and foot gestures.

Draw-o-lin: A Music Visualizer for Violin   2011

What does music look like? Draw-o-lin is an interactive mobile robot visualizing music by drawing graphs on a paper according to various sound properties. Violin performers control the robot by playing various pitches, alternating the volume, and changing the tempo of the music.

SynTag: A Web-Based Platform for Labeling Real-time Video [C2, C1, T1]   2010

Users can label Good, Question, and Disagree tags in real or non-real time with visualization of time-stamp video previews on an interactive timeline. SynTag creates thumbnails by using real-time tags for presenters to receive instant feedback and for others to retrieve videos.
